

WATERPROOFING ADMIXTURE POWDER (MORTAR AND CONCRETE WATERPROOFING AGENT)

321

Lankosec

913 50

DESCRIPTION

321 LANKOSEC significantly reduces the capillarity of mortar and concrete and increases their resistance to water.

321 LANKOSEC is suitable for use with ordinary cement and blast furnace slag cement.

CHARACTERISTICS

Improves the resistance to water of mortar and concrete.

Limits the appearance of efflorescence and saltpetre.

Improves the plasticity of mortar and concrete.

Chloride-free admixture.

Pre-measured for 50kg of cement.

USES

Waterproofing :

- Mortared facades exposed to driving rain.
- Masonry joints.
- Foundation levelling coats

Sealing of different structures, including :

- Concrete foundations below water table level
- Buried concrete
- Concrete for water tanks and basins
- Basements

SPECIFICATIONS

- Appearance: fine, grey-beige powder
- Apparent density : 0.45
- Solubility : partial, in water
- CaCl² content : none

INSTRUCTIONS

Product preparation

- Shake 321 LANKOSEC into the dry cement mix and mix thoroughly
